

# Habitats

# What is a habitat?

A habitat is a home for plants and animals. The habitat provides safety, shelter, food and somewhere to raise or grow young.

# Learning About Habitats

You are going to research habitats this week in Science. Use the websites on the next page to find out about different habitats. Then produce something to show off what you have learned. You could produce a booklet, a poster or draw pictures. Either choose one habitat, several or all of them.
